PRIVATE WORKSHOPS

See the patterns. Build your systems.

Custom workshops, delivered at the level your group is already at and built around the work your team already does.

Up to 12	4 hours	Your stack
people in one room	one working session	custom group builds

FOUNDATIONS

Asking to Directing

- Judgement on inputs, tools, and permissions
- Personal and company context set up to match the work
- Your tools connected and a first shared skill built together

SKILLS & AUTOMATIONS

Directing to Operating

- A shortlist of what to automate first
- Skills and agents built as a group
- A small blast radius: start read only and keep a person on anything that sends

One workshop away from a working first run.

Packages are built around the group size and the problems already in the room.

Always Allow

THE WORKING PROGRESSION

Move from one answer to a system that runs.

Asking	Directing	Delegating	Operating
One question, one answer.	You say how, not just what.	Whole pieces of work, handed over.	Systems that run while you do something else.

01

Before

A prep call narrows the field to the real work and tech stack.

02

In the room

We build together, at the level the group is already at.

03

After

The team leaves with what it made and a route for the next run.

INCLUDED

Prep call
Choose the right problem and level.

Skill-build roadmap
Keep the next useful builds visible.

Virtual check-in
Return to what is working and what is not.

Bring it to your team.
